

## ***Final Project Problem Statement:-***

***Developed a desktop application which is a fantasy cricket game where we would create a virtual team of cricket players and score points on how the players perform in different matches. ([https://trainings.internshala.com/uploads/python/downloads/project/v\\_2/Python\\_FinalProject\\_ProblemStatement.zip](https://trainings.internshala.com/uploads/python/downloads/project/v_2/Python_FinalProject_ProblemStatement.zip))***

---

*Content of the .zip file:*

- *The main application code*
  - *A Database of cricket players and their relevant stats*
  - *The application .ui file*
  - *The synopsis file*
- 

### **There are following steps involved through the project :-**

- i. Created the database of players and added data to the database.
- ii. Create the GUI using PyQt, then generate the required Python code for the UI using pyuic5 utility.
- iii. Finally added Event Handling (methods, attribute etc.) to the .py code.
